SUGAR BEETS 1924 - 1952

This publication brings together for the first time all of the official estimates of the Crop Reporting Board relating to sugar beets from 1909 through 1952. Although sugar beets have been grown successfully since about 1889, the official estimates do not begin until 1909.

The first recorded attempt to grow beets in the United States for making sugar was made near Philadelphia in 1836, but no sugar was produced from this venture. The first sugar factory in the United States was erected at Northampton, Massachusetts, in 1838, and in 1839 this factory produced the first beet sugar--1,300 pounds--in the United States. This factory did not operate after 1840. From 1840 to 1888 no less than 13 factories were erected in the widely separated States of Utah, California, Illinois, Wisconsin, Maine, Delaware, and Massachusetts, but all were unsuccessful.

In 1889 the Alameda Sugar Company took over the factory at Alvarado, California, and this company and its successors have operated a factory at this location since that year. The growth of the sugar beet industry since this period can best be shown by citing statistics for certain years. In 1888, the two factories then in existence produced slightly over 2,000 short tons of refined sugar. Ten years later, in 1898, 16 factories produced 36,000 tons of sugar. In the next 10 years the number of factories had increased to 62 and in 1908 produced 426,000 tons of sugar. In 1915, 67 factories produced 874,000 tons of sugar from a sugar-beet crop of 6,511,000 tons. The first year in which United States sugar production exceeded one million tons was in 1920 when 97 factories produced 1,089,000 tons of refined sugar from 8,538,000 tons of beets. In 1950, growers produced the largest crop of sugar beets on record, 13,535,000 tons, from which the 72 operating factories produced 1,878,000 tons of beet sugar.

¹/Prepared by George D. Harrell under general supervision of C. E. Burkhead, both agricultural statisticians of the Field Crop Statistics Branch. Data on prices and on abandonment and deficiency payments were prepared by G. A. Swanson under general direction of B. R. Stauber, both agricultural statisticians of the Agricultural Price Statistics Branch. Basic data relating to Sugar Act payments, CCC program payments, processor payments, and, beginning with 1940, acreage and production are from the Sugar Division of the Commodity Stabilization Service.

The following tables bring together all of the official estimates of acreage of sugar beets, yield per acre, production, prices received by growers, and value of production by States and for the United States for each year on record from 1909 through 1952. Estimates are not shown by States prior to 1924 since the data, as collected, applied to the State where the sugar beets were processed rather than the State where the sugar beets were grown. Consequently, estimates for 1909-1923 are shown only for the United States.

Also shown in table 2 are estimates of production of refined sugar, beet pulp, and beet molasses. All of these estimates relate to the calendar year in which the sugar beets were harvested, including those beets in California which are planted in the Fall and harvested in the Spring. In this respect this series differs from the estimates of sugar-beet products of the Sugar Division of the CSS, which includes production from California fall-planted beets in the year in which the beets were planted.

For historical comparisons prior to 1909, there are shown in table 27 the available statistics of harvested acreage and production of sugar beets and production of beet sugar for the period 1888 to 1908 as compiled from various sources. These should not be considered as official estimates of the Department of Agriculture.

The data on average prices received by growers and on value of production, as shown in tables 1 through 26, relate to payments made directly to growers by sugar companies. They include support payments but do not include United States Government payments made directly to producers under the Sugar Acts. These direct payments are of two types: (1) Program payments made on the sugar commercially recoverable from the beets that qualify for payment; (2) payments for crop deficiency and bona fide abandonment of planted acreage resulting directly from drought, flood, storm, freeze, disease, or insects. The support payments, average prices received by producers, program payments, and total payments are shown in table 28 in terms of dollars per ton of beets produced. The total dollars paid for abandonment and crop deficiencies are shown in table 29. Total income received by growers from sugar beets may be computed by multiplying the total payments per ton shown in table 28 by the tons of beets produced, and adding the amounts received from abandonment and crop deficiency payments. The program payments started in 1934, and the abandonment and deficiency payments in 1937, while support payments were made only in 1943-45 and 1947.

Table 1.--UNITED STATES: Acreage, yield, production, price and value of sugar beets, crop years 1909-52 1/

Crop year	Acreage planted	Acreage harvested	Yield per acre	Production of sugar beets	Price per ton	Value of production 1,000 dols.
	Acres	Acres	Tons	Tons	Dols.

1/ Payments from 1937-47 made under authority of Sugar Act of 1937, as amended. The 1948 and subsequent crop payments made under Sugar Act of 1948. Compiled from records of Sugar Division, Commodity Stabilization Service.

2/Less than \$500.

FOOTNOTES FOR TABLE 28

1/ Support payments in 1943-45 and 1947 were made under the price support programs of the United States Department of Agriculture. These support payments are reflected in the estimated average prices received by farmers. Program payments represent gross payments for sugar beets marketed before deducting local administrative expenses which were charged in the years 1934-44. Payments with respect to crop deficiency and acreage abandonment have not been included. See following table for amounts of abandonment and deficiency payments. The bases for program payments of the amounts shown are as follows: 1933, processing tax refund pursuant to Jones-Costigan Act; 1934 and 1935, parity payments pursuant to Jones-Costigan Act; 1936, no program in effect; 1937-51, average per ton of beets produced for payments made under the Sugar Act. Data on support and program payments compiled from records of Sugar Division, Commodity Stabilization Service.

2/ Data not available for these States individually. The group average of \$0.19 was used in computing total payment.

3/ No program.

4/ Includes price support payments.

5/ Price support data for 1947 crop not available by States, average \$1.30 nationally.
